

Alexander Savvatimskiy

Carbon at High Temperatures

Наиболее полная монография по исследованию свойств графита при высоких температурах, опубликованная издательством Springer в 2015 году.

Содержание

1 The First Attempts of Carbon Melting and Obtaining Diamond Phase of Carbon (1911–1939)

1.1 Astrophysical and Terrestrial Aspects of the Carbon Study

1.2 State of the Art with Graphite Melting in 1911 Year

1.3 The First Substantial Experiments of Stationary Study of Graphite by Pirani 1925–1939

1.4 Estimated Study for Obtaining Diamond by Leipunsky 1939

2 Resistivity and Heat Capacity for Solid Graphite up to 3000 K

3 Carbon Triple Point (Graphite/Liquid/Vapor)

3.1 First Attempts to Obtain Triple Point Parameters (1939–1976)

3.1.1 The First Experimental Evidence of the Pressure at the Triple Point Slightly Higher 100 Bar

3.1.2 Effort to Search Phase Boundary SolidLiquid at a Pressure up to 1000 Bar

3.1.3 Detailed Investigations of Carbon Under Laser Heating by Haaland and His Critical Review of Previous Determination of Triple Point Parameters (All the Conclusion Made by Haaland, but not the Author of the Monograph)

3.2 The Role of the Condensed Graphite Vapor at the Laser Heating

3.3 The Start of Graphite Melting Recorded by the Enthalpy

3.4 Start of Melting Obtained at Milliseconds Heating

3.5 Temperature at the Melting Point Obtained in the Experiments with the Different Velocity of Heating

3.6 Temperature of the Triple Point Under Steady State Laser Heating

3.7 The Result of the Discussion on the Triple Point Parameters

3.8 Give the Experimental Facts on Carbon (Just Near the Melting Point)

4 Resistivity up to Melting and the Recording of Melting Area

4.1 Graphite Resistivity (Versus Inserted Energy Only) Under Pulse Current Heating

4.1.1 Graphite Resistivity (Versus Inserted Energy) at High Pressure

4.1.2 Correspondence of the Author with Francis Bundy, 1999

4.1.3 Resistance Against Inserted Energy up to Melting (Fast Electrical Heating)

4.2 Melting Area Recorded Under Pulse Heating and Emissivity Estimation

4.2.1 The Start of Melting and Graphite Emissivity at Milliseconds Current Heating

4.2.2 The Whole Temperature Plateau Recording (First Published) for Graphite of Low Initial Density

4.2.3 Particular Feature of Recording of Graphite Melting Under Laser Heating

5 Stationary Experiments on Physical Carbon Properties (Enthalpy and Thermodynamic Functions) Against Temperature

5.1 Enthalpy Against Temperature (Steady State Experiments up to 3800 K, and Further Calculation up to 4900 K)

5.2 Expansion Graphite upon Melting (Calculation)

6 Liquid Carbon Properties Against Input Energy Only

6.1 Resistivity Against Input Energy Near the Melting Point

6.1.1 Liquid Carbon Resistivity just at the Melting Point (Experiments by Togaya 1997 and 2000)

6.1.2 Resistivity Against Pressure Just After the Melting

6.1.3 Experiment by Togaya 2010

6.1.4 Discussion on the Resistivity at the Carbon Melting Point

6.2 The Fast Electrical Heating of Different Grades of Carbon

6.2.1 Resistivity and Expansion at the Melting Point (Gathers et'al.)

6.2.2 Advantages of Fast Heating (Microseconds) by Electrical Pulse Current Before Slow (Milliseconds) Heating

6.2.3 Resistivity of the Carbon in a Broad Range of Liquid State (with the Expansion Included)

6.2.4 Resistivity of Dense Isotropic Graphite MF307 Higher Melting Point (with the Expansion Included)

6.2.5 Critical Sensitivity of Graphite Melting to the Magnitude of the Pressure (Experiments in the Sapphire Capillary Tubes)

6.2.6 Pulse “Pinch” Pressure at Fast Electrical Heating

7 Experimental Setup in Fast Heating of Carbon

7.1 Pulse Experimental Arrangements in Laboratory of Electroexploding Processes (JIHT)

7.1.1 Introduction

7.1.2 Pulse Experimental Setup for Training Students and Postgraduates

7.1.3 Powerful Pulse Installation for Fast Heating of Graphite Plates

7.1.4 Specimens

7.2 Choice of a Blackbody Design and Fast Pyrometer for Recording Melting and Liquid State of Carbon

7.2.1 Select a Blackbody Design

7.2.2 Fast Pyrometer Made by V.N. Korobenko (JIHT)

7.3 Melting and Liquid State Recorded at Fast Pulse Heating

7.3.1 Melting of Anisotropic Graphite Placed Between Two Sapphire Plates

7.3.2 Melting of Anisotropic Graphite Placed Inside the Sapphire Capillary Tube

7.3.3 Estimation of Sapphire Melting and the Possible Destruction of a Sapphire Tubes

7.4 Input Energy Versus Temperature for Liquid Carbon State (up to 12,000 K)

8 The Evolution of Experimental Carbon Phase Diagram

8.1 Phase Diagram by Vereshchagin (1963 Year)

8.2 Phase Diagram for Carbon Obtained by Francis Bundy

8.3 Phase Diagram for Carbon, Obtained by Motohiro Togaya

8.4 The Dependence of T_{melting} Against Pressure

8.5 Phase Diagram for Small Particles of Carbon

8.6 Modeling of Carbon Phase Diagram
8.6.1. Data of Ghiringhelli and Meijer.

8.6.2. Data of Glosli and Ree.

8.6.3. Data of Umantsev, and Akkerman.

8.6.4. Data of Colonna, Fasolino, and Meijer.

8.6.5. Data of Shabalin.

8.6.6. Data of Orekhov and Stegailov.

8.6.7. The resume for all considered papers of the Chapter 8.6.

9 Pulse Heating Application to Study High Pressure Carbon State

9.1 The Advantages of Fast Carbon Heating to Measure Properties at High Temperatures and Some Practical Applications

9.2 From Diamond—to Liquid Carbon with Temperature Recording (Experiment by Eggert et'al. USA)

9.3 From Diamond—to Liquid Carbon at the Highest Pressure (Experiment by R.F. Smith, Gilbert Collins et'al. 2014, USA)

9.4 Methods Summary

10 Graphene Investigation

10.1 Calculation of Graphene Melting [1]

10.2 Thermal Properties of Graphene: Experiments and Theory of Alexander Balandin and Coauthors

10.3 Measuring of Melting Temperature of the HAPG Graphite Under Fast Electrical Heating in 2015 Year

11 Conclusion
